

Identi-Kit®

Advanced Facial Composite Software

Identi-Kit

7

EDUCATION

Identi-Kit 7 is redesigned with new tools and features to make even better sketches. Identi-Kit is an investigative tool used by law enforcement agencies, the Departments of Justice, Defense and State and international police departments. We are committed to giving your Criminal Justice instructors the training and tools necessary to make Identi-Kit a valuable part of the CJ curriculum in your school, whether in the classroom or on line.

- ◆ *Develop students' career skills and ability to understand the tools and procedures actually used by law enforcement.*
- ◆ *Identi-Kit 7 is designed to be intuitive to use. Students quickly learn how to use the application to create clear, hi definition facial composite sketches.*
- ◆ *Instructors can get expert instruction by attend training and certification webinars throughout the year. Get access to the video library to supplement classroom instruction.*
- ◆ *Identi-Kit is Windows 7 and 8 compatible. The application is compatible with all commonly used distribution schemes, whether it's imaging to multiple campuses or installation on a single PC.*
- ◆ *Technical support is always available to help instructors or IT staff get the most from the software.*

TESTIMONIALS

"The program is very user friendly and the detectives had no problems navigating through the system. The composites produced looked authentic and professional."

Sergeant,
Florida Police Department
